The Open University

Statement of participation

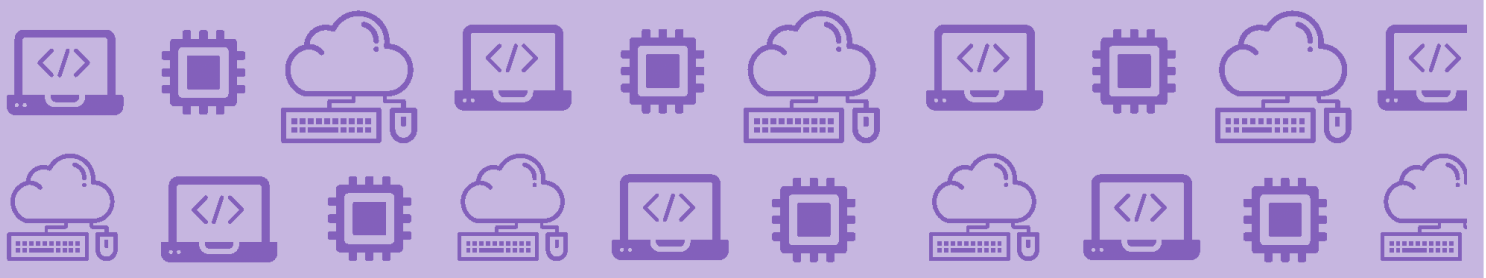

MILU Jiji

has completed the free course including any mandatory tests for:

An introduction to computers and computer systems

This free 16-hour course explored computers and computer systems, using examples such as kitchen scales and digital cameras.

Issue date: 10 November 2023

www.open.edu/openlearn

This statement does not imply the award of credit points nor the conferment of a University Qualification.
This statement confirms that this free course and all mandatory tests were passed by the learner.

Please go to the course on OpenLearn for full details:

The Open University

An introduction to computers and computer systems

https://www.open.edu/openlearn/digital-computing/an-introduction-computers-and-computer-systems/content-section-overview

Course summary

This OpenLearn course challenges how we view computers through the examples of processors in kitchen scales and digital cameras, as well as examining the work of art that, at heart, is a computer. You will also explore how computers are connected together to achieve even more than when working alone.

Learning outcomes

By completing this course, the learner should be able to:

- recognise the fundamental hardware components that make up a computer's hardware and the role of each of these components
- describe the difference between an operating system and an application program, and what each is used for in a computer
- understand something of the work involved in designing an application program
- appreciate some of the core networking technologies used to connect computers together
- reflect on some of the future directions for computers and computer systems.

Completed study

The learner has completed the following:

Session 1

Introduction

Session 1: Computers and processors

Session 2

Session 2: The components of a computer

Session 3

Session 3: Some facts about processors

Session 4

Session 4: Representing data and instructions inside a computer

Session 5

Session 5: Examples of computers

Session 6

Session 6: Computer programs

Session 7

Session 7: Networks of computers

Session 8

Session 8: A look to the future
